

How to Measure The Radius Corners of a Trailer

Figure 1

US Tarp's® Agriculture and Specialty tarping systems are custom made to order and must be measured correctly. These systems, because they are custom, are non-refundable. It is important that you provide all the correct details on our online order sheet.

To measure radius corners, use a carpenter's square on the front radius of the trailer. From here, you measure the point in which the radius begins to arch around the front of the trailer (Figure 1).

If additional support is needed, call our number at 800-249-0297 where our technical support line can be found, and our knowledgeable team will assist you.
