

Safe-T-Lift™ for Pull Style Tarping System

The Safe-T-Lift™ is an easy-to-use spring and arm system that lifts the rear pull bar over the load. It is easier and safer to operate than a standard pull style tarp system alone. Its spring-tensioned arms use a light single spring on each side, permitting the driver to easily pull the tarp and walk it to the back.

The Safe-T-Lift allows the driver to deploy or stow the tarp quickly from ground level increasing safety and productivity without adding significant cost or complexity to the system.

US Tarp now provides 16-ft and 18-ft options, ideal for 8-ft to 10-ft high-body sidewall trucks, widely used by state Department of Transportations across the country. Because the truck sidewalls are tall and loads can be coarse, conventional pull style systems can be difficult to deploy.

Safe-T-Lift is a first-fit option for new dump body installations and can be easily retrofit by distributors or dealers to most conventional pull style tarp systems.
